MR-COLOC ANALYSES

47.2 million MR tests

Mendelian randomization
- Genome-wide ($p \leq 5e-8$)
- $r^2 < 0.05$
- HEIDI-outlier-flag = T
Genetic colocalization
- cis & trans $H4 \geq 0.8$

DATABASE CONSTRUCTION & ENRICHMENT ANALYSES

80,228 unique target-trait pairs
(62,878 colocalizing)

Additional filtering
- MR p-value $< 0.05/47M$ tests
- Remove medically irrelevant
traits (n = 594)

Match with Pharmaprojects
(Minikel et al)

Supplementary Table 16

- 317 drug targets overlap
- 93 target-indication pairs

MeSH similarity ≥ 0.8

L2G share ≥ 0.5

Restricted to genes with
measured proteins

Phase 1 baseline

pQTL enrichment analysis

- 49 pQTL-supported T-I pairs (S[G])
 - 23 pQTL-supported T-I pairs
from Phase 1 > Launch
(A[G])
- 7,166 unsupported (S![G])
 - 758 unsupported T-I pairs
from Phase > Launch
(A![G])
